

LAWN CARE with SOIL SOLVER

- ✓ cures water repellency
- ✓ holds water & nutrients
- ✓ saves fertiliser
- ✓ stays moist longer

Lawns are an important part of keeping our homes cool and inviting, great to entertain on and add value to a property. Keeping them lush and green while using less water in the hot summer months is ALL about good soil preparation, and there is nothing better than Soil Solver's mineralised clay.

Soil Solver Clay Plus is a fully mineralised, hand crafted, kaolin clay based soil improvement product that offers superior long term results for healthier lawns and gardens. The blend of minerals and fine particles permanently cures water repellency and deter pests that prefer dry sandy conditions, like lawn beetles, ants and sting nematodes. Plus it helps the lawns stay greener in the wet winter months.

Existing dry and water repellent sand is quickly and easily transformed into water retentive, fertile and fully mineralised loam soil for new lawns by adding Soil Solver products. They can also be added to boost a top dressing mix for a long term cure for water repellency as well as pest issues in existing lawns.

The Soil Solver Product range includes all the premium quality, natural ingredients needed to transform sand into organic rich and fertile soil. **Clay Plus**, Rich **Mature Compost**, **Pure Rock Minerals** & fully mineralised finely screened **Compost Plus** for feeding lawns and garden beds. You can rely on great results.

NEW LAWNS

Mix Clay Plus and Mature Compost into existing sand before laying a lawn

Spread a thin layer of Clay Plus and Mature Compost on the surface, and mix thoroughly into the top 10 cm using a garden fork or a rotary hoe.

Higher quantities mixed deeper increase the fertility and water retention of the soil.

Recommended rates:

10 kgs of Soil Solver Clay Plus with 10 litres of Mature compost per sqm

RENOVATE LAWNS

Top dressing.

For best results, core the lawn first.

Mix 9 parts of a bagged soil mix with 1 part Clay Plus in a trailer or wheelbarrow.

Spread over the lawn using the back of a rake, filling in any depressions in the surface. Run the reticulation to water it in well.

Recommended rates:

A Trailer load of a commercial lawn mix blended with 3 bags of Soil Solver Clay Plus treats up to 70 sqm of lawn to a depth of 10mm.

To work out how much top dressing material you need

Step 1. Measure your lawn, the width x the length = square metres (sqm).

Step 2. Work out how much top dressing material you will need by multiplying by a fraction of the depth you are adding to the lawn

Example : For 10mm depth multiply the sqm of lawn by 0.010

A trailer load of soil = 0.7 of a cube

0.7 divided by 0.010 = 70 sqm coverage at 10mm depth
